

Jumpstarting Student Research Fellowship

The 2026 **Jumpstarting Student Research Fellowship** — presented by the Belin-Blank Center and the Holden Comprehensive Cancer Center — will provide science teachers with indispensable resources to support student research within their classrooms. Awardees will be given a scholarship to attend an on-campus workshop as well as \$2,000 to make their newfound instructional ideas a reality.

The goal of the program is to help students embrace the scientific method — and possibly even compete in programs such as the High School Research Symposium (HSRS)!
